Summary

Research Data Scientist with 8+ years of experience in quantitative research, data analysis and scientific computing. Skilled in building reproducible Python workflows and validated statistical and machine-learning models for structured, time-series, imaging and simulation data. Experienced in serving models with FastAPI, delivering Streamlit applications and communicating decision-ready findings to international multidisciplinary teams.

Technical Skills

Programming Languages: Python, SQL, MATLAB

Deep Learning Frameworks: TensorFlow, PyTorch, Keras

Machine Learning & Visualization: NumPy, Pandas, Scikit-learn, matplotlib, seaborn

Libraries & Tools: FastAPI, Docker, Streamlit, Git/GitHub

Cloud: AWS S3-based data lakes and Lambda (working knowledge)

Experience

Research Data Scientist — Oct 2024 – Present
University of Cambridge — *Cambridge, UK*

- Lead end-to-end analysis of experimental, microscopy and simulation datasets
- Build reproducible Python pipelines for cleaning, integration, statistical modeling and visualization
- Apply statistical and physical models to guide experimental priorities and validate results
- Communicate evidence-based recommendations to international multidisciplinary collaborators

Doctoral Researcher — Sep 2020 – May 2024
Peking University — *Beijing, China*

- Developed numerical and machine-learning models of mineral formation in extraterrestrial bodies
- Built reproducible Python workflows for data processing, model evaluation and visualization across large simulation datasets
- Supported peer-reviewed publications, international collaborations and successful funding applications

Featured projects

SeismiCNN — End-to-end anomaly-detection classifier — 2026
Deep Learning Project — *TensorFlow, FastAPI, SQL, Streamlit*

- Built a CNN to detect anomalies (earthquake signals) in noisy time-series data
- Developed end-to-end ML framework including preprocessing, model training, validation and inference
- Built a FastAPI model interface, SQLite event database and Streamlit dashboard for reviewing detected events

Rental Market Segmentation — 2025
Machine Learning Project — *Selenium, scikit-learn, FastAPI, Streamlit*

- Scraped and cleaned rental listings and engineered predictive features
- Developed clustering and regression models to identify market segments and estimate advertised rents
- Delivered results through a Streamlit application and FastAPI backend.

Education

MBA in Machine Learning — UK
Cambridge Spark — *Oct 2025 – Present*

MBA in Machine Learning Engineering — Brazil
FIAP — *Mar 2025 – Mar 2026*

PhD in Computational Geophysics — China
Peking University — *Sep 2020 – May 2024*
