SUMMARY

Research Data Scientist with 8+ years of experience in quantitative research, data analysis and scientific computing, with US\$ 30k+ secured in independent funding. Builds reproducible Python workflows and validated statistical and machine learning models for structured, time-series, imaging and simulation data. Experienced in serving models with FastAPI, developing Streamlit applications and translating complex results into decision-ready insights for international multidisciplinary teams.

TECHNICAL SKILLS

Programming Languages: Python, SQL, MATLAB

Deep Learning Frameworks: TensorFlow, PyTorch, Keras

Machine Learning & Visualization: NumPy, Pandas, Scikit-learn, matplotlib, seaborn

Libraries & Tools: FastAPI, Docker, Streamlit, Git/GitHub

Cloud: AWS S3-based data lakes and Lambda (working knowledge)

EXPERIENCE

Research Data Scientist

University of Cambridge

Oct 2024 – Present

Cambridge, UK

- Automated Python workflows to process 1+ TB of microscopy, experimental and simulation data
- Applied statistical and physics-based models to guide experiments and validate results
- Delivered analyses supporting three publications in leading peer-reviewed journals
- Communicated evidence-based recommendations to international multidisciplinary collaborators

Doctoral Researcher

Peking University

Sep 2020 – May 2024

Beijing, China

- Engineered numerical and machine-learning models of mineral formation in extraterrestrial bodies
- Built reproducible Python workflows to process, evaluate and visualize 100+ GB of simulation data
- Published 2 peer-reviewed papers and supported successful funding applications (US\$ 110k+)

FEATURED PROJECTS

SeismiCNN – End-to-end anomaly-detection classifier

Deep Learning Project

2026

TensorFlow, FastAPI, SQL, Streamlit

- Built preprocessing and augmentation pipelines for +600k labelled three-channel seismic windows
- Trained an eight-layer CNN, achieving ~72.8% accuracy on a +60k-sample test set
- Served model inference through FastAPI and developed a Streamlit dashboard backed by SQLite

Rental Market Segmentation

Machine Learning Project

2025

Selenium, scikit-learn, FastAPI, Streamlit

- Scraped and cleaned rental listings and engineered predictive features
- Developed clustering and regression models to identify market segments and estimate advertised rents
- Delivered results through a Streamlit application and FastAPI backend.

EDUCATION

MBA in Machine Learning

Cambridge Spark

United Kingdom

Oct 2025 – Present

PhD in Computational Geophysics

Peking University

China

Sep 2020 – May 2024

MSc in Applied Physics

São Paulo State University

Brazil

Mar 2018 – July 2020
